

EXPLORE YOUR WORLD

The concentration in Environmental Science and Public Policy (ESPP) is designed to provide a multi-disciplinary introduction to current challenges and issues of the environment. It is founded on the premise that the ability to form rational judgments concerning many of the complex challenges involving the environment that confront today's society requires both an understanding of the underlying scientific and technical issues and an appreciation for the relevant economic, political, legal, historical, and ethical dimensions. The program offers students an opportunity to formulate a field of specialization relating to the environment.

"The ESPP concentration was an excellent way to develop fundamental skills in scientific investigation, and there are many opportunities to apply these interdisciplinary skills to different topics and projects in one's career after Harvard."
» Jaclyn Hatala Matthes '07, Assistant Professor, Dartmouth College

WHO WE ARE

HEAD TUTOR:

Paul Moorcroft,
Professor of Biology

ESPP COORDINATOR:

Lorraine Maffeo

SECONDARY FIELD:

Eric Simms

"Your work could take you to the lab, to the field, or to the State house. Or all three. ESPP offered me this range of experiences and options."

» Gracie Brown '11
